# 1. Introduction

## 1.1. Background

Singapore is a well developed city-state located in South East Asia. Well known as the main financial and logistic hub of the region, various businesses continue to develop here. This opportunity attracts various culinary businesses like food courts, restaurants, dessert stalls, and cafes to set up their shops here. However, the growing number and diversity of culinary businesses in Singapore is so overwhelming, so that a new culinary entrepreneur will need to perform serious initial feasibility study to carefully plan their growing business. Every new culinary entrepreneur will need to analyze potential customers to make sure that their business can grow. Apart from that, they also need to consider potential competitive businesses that may drive them out of the culinary business competition.

Figure 1. (a) Singapore location in South East Asia. (b) Singapore's financial centre as well as tourist attraction. (c) Popular food court centre. Various Singaporean food and beverages such as (d) chili crab, (e) Singaporean noodles and (f) Tangyuan dessert.

## 1.2 Problem Description

In summary, the target audience is:

- **culinary entrepreneurs (food courts, restaurants, fast food joint, cafes etc)**, who want to open a new business.

Problems to investigate:

- **Where to open their new business?**
- **How many is their potential customers?**
- **What kind of competitors they may face?**

Why would our target audience (culinary entrepreneurs) care:

- **They need to decide a place to start their business.**
- **Without selecting the correct place, they may fail to get customers.**
- **Without customers nobody buys their products.**
- **Also, they need to differentiate themselves from competitors.**

## 2. Data Description, Relevance, Acquisition, and Preparation

### 2.A Data Description

There are several main datasets I collected:

- **Zones and Coordinates Info for Each Location in Singapore**
- **Population Counts for Each Zones**
- **Venues Category and Counts for Each Zones**

### 2.B Data Relevance, How it Will Solve the Problem

Zones and Coordinate Info for Each Location in Singapore can be used to identify location of various neighborhood in this city. Subsequently, we want to collect population counts for each zones. Regions, with high population counts may provide our target audience (culinary entrepreneur) who want to leverage large number of customers. Subsequently, we want to collect data about various venues culinary or non-culinary using Foursquare API.

If it is non-culinary, it is of interest to our target audience since it is possible to pair our culinary product with those venues. For example healthy food stall may be a good pair around sport stadium and cafe may be a good pair with library.

If it is culinary, it is also important to decide whether they are in the same category or not. If we want to open a ramen shop, we must check not only the presence of other ramen shop, but also udon, noodles, pasta etc. On the other hand, it may be okay if the other venues are selling different kinds of food such as kebab or dessert such as

ice cream. Using data that we can obtain using Foursquare API, we can help to provide a dataset that can help our customer to investigate and decide where to open up their venue.

## 2.C Data Acquisition

### 2.C.1 Zones and Coordinates Info

For the case of Singapore venues analysis, I decide to use Development Guide Plans (DGP) zones or also known as planning areas to divide Singapore neighborhood. According to the government's document, DGP zones or planning areas are the main urban planning and census divisions of Singapore. The division is delineated by the Urban Redevelopment Authority to provide detailed planning guidelines for each plot of land throughout the city-state. There are a total of 55 of these DGP zones or planning areas.

Unlike the postal sectors division, a clear map that delineate the divisions between DGP zones is more readily understood, as can be inspected on Figure 2 below.

Figure 2. Development Guide Plans (DGP) Zones or Planning Areas in Singapore.

Reference: '[https://en.wikipedia.org/wiki/Planning\\_Areas\\_of\\_Singapore](https://en.wikipedia.org/wiki/Planning_Areas_of_Singapore)'

From now on, we will refer to Singapore neighborhoods according to this zones division. It needs to be noted that the coordinates value can not be obtained from the above mentioned wikipedia page, but most of the coordinates can be obtained from

the specific zone coordinate as displayed on the wikipedia subpage for each zone. First, we obtain the zones division by using Beautiful Soup 4 module to extract data from the main wikipedia page in form of witable class.

On the witable in the main Singapore zones page, there is a link that can lead to subsequent wikipedia page to describe in more detail, the description for each zone or neighborhood. From that page, we can collect information regarding the coordinates location for each zone. We then use the Beautiful Soup 4 module to parse this information from each zone wikipedia page. Some zone's page is incomplete, so we use geocoder to put the zones name to locate the coordinate. Overall process to acquire this information is succintly described in Figure 3.

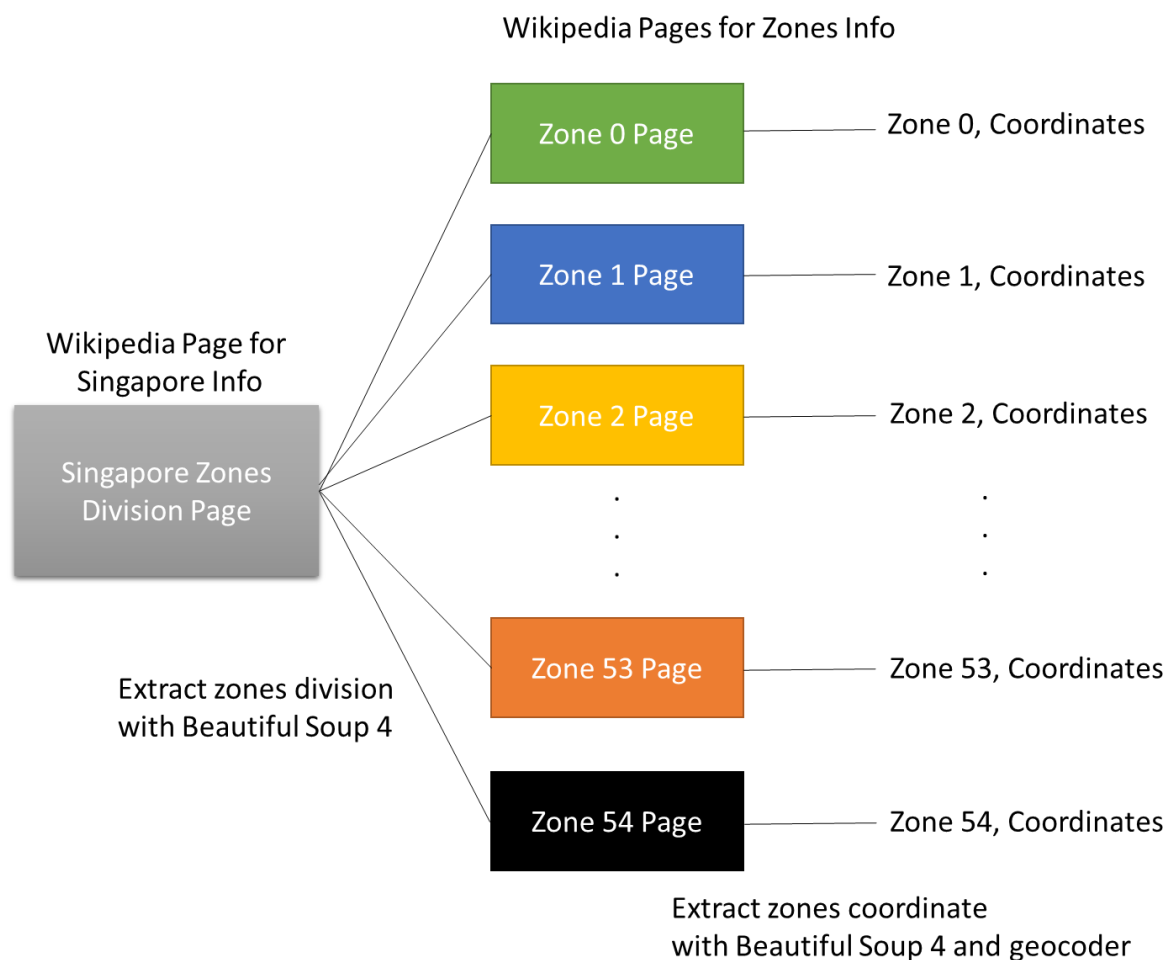

Figure 3. Scheme to Extract Zones Division and Coordinates for Singapore

## 2.C.2 Population Count for Each Zones

We can use similar scheme like in Figure 3 to collect population count for each zones. Fortunately, the data is already tabulated in the main Singapore wikipedia page, so I simply use the Beautiful Soup 4 to parse the data directly from the table. I also collect areas data in case it become handy. Based on the data, we collected so far, we can use pandas dataframe to describe it as shown in Figure 4. The dataframe describe zones division and zone\_links which can be used to extract more information for each neighborhood. It also contains latitude and longitude coordinates we extracted for each zone. Data about population and areas is included as well.

Out [5] :

	DGP zones	zone_links	latitude	longitude	population	areas
0	Ang Mo Kio	/wiki/Ang_Mo_Kio	1.370167	103.845619	165710	13.94

21	Marina East	/wiki/Marina_East	1.291158	103.872019	0	1.82

Figure 4. Pandas dataframe that describe Singapore zones location, population, and areas.

Note that in total, there are 55 zones in Singapore.

### 2.C.3 Folium Map for All Zones Location

For visualization, I use Folium module to put a marker for each Singapore zones. Using python, we loop through all of the neighborhood, and then put the zones marker for each associated coordinates value. The result is shown in Figure 5. As we can see, the zone is distributed across the city-state. The highest concentration of neighborhoods is in the southern part of the Islands which is a busy marine port and the main financial center of the city. Neighborhood tends to be sparser in the West, East, and Northern part of the city. There are several zone located in or nearby natural reserve such as the two water catchments in the center and in the western region. Some zones are even located on the nearby islands, tends to be isolated from other parts of the city. South West region tends to be filled with industrial businesses. The East region is filled with one public airport and several other airbases. The rest is domestic or residential areas of Singapore.

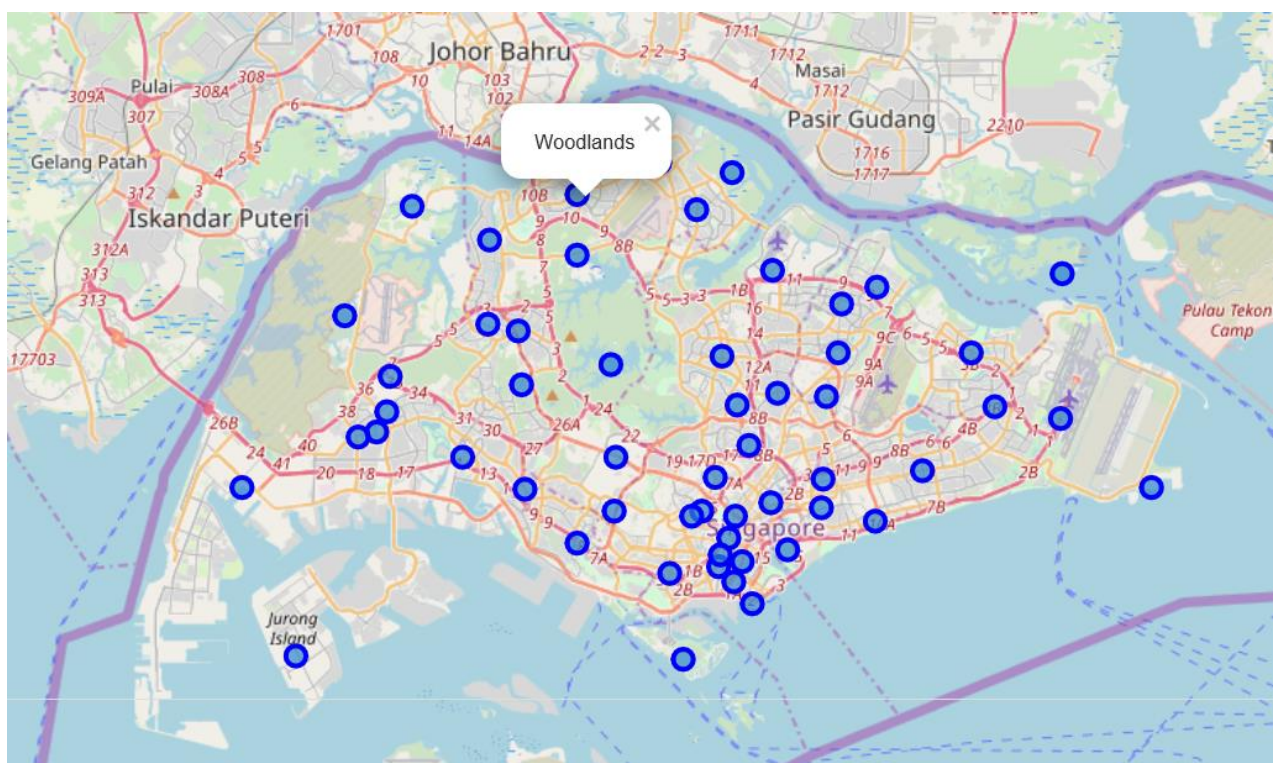

Figure 5. Folium map with markers, with each marker representing each zone or neighborhood in Singapore. As an example 'Woodlands' neighborhood is marked on the northern part of Singapore.

## 2.C.4 Venues Data Extracted with Foursquare API

Subsequently, we use Foursquare API to extract data for venues around a particular neighborhood. Figure 6 shows an example of venues data around Ang Mo Kio neighborhood. It can be seen that we manage to collect venues names, categories (park, Spa, supermarket, noodle house, seafood restaurant, etc). We also manage to collect the detailed coordinates or the latitude or longitude value for each venue. This later info will be used later to have more detailed understanding of venues location.

Out [53]:

	name	categories	lat	lng

21	Double Scoops	Ice Cream Shop	1.367655	103.839277

Figure 6. Example of venues detail for Ang Mo Kio neighborhood.

Subsequently, we do the same thing for other neighborhoods in Singapore. It needs to be noted that some neighborhood have very few venues while other have a lot of them. Not only that, the categories for each venue can be significantly different. It is important to see which venues available in each particular zone.

### 3. Methodology

#### 3.1 Exploratory Data Analysis and Inferential Statistical Testing

In terms of exploratory data analysis (EDA), we will try to categorize the venues category in more organized manner. We will tabulate all of culinary and non-culinary category in easily understandable terms.

We will use inferential statistical testing to investigate what kinds of culinary venues is more popular in particular neighborhood. However, it is also important to predict what kinds of potential venues is missing from particular neighborhood.

Results for EDA and inferential statistical testing is shown in detail in section 4.1.

#### 3.2 Machine Learning for Neighborhood Clustering

We will use K-Nearest Neighbor method to cluster the neighborhood in order to understand the overall segmentation shared by the neighborhoods. Neighborhoods sharing the same cluster will tend to share more similar characteristics than neighborhood outside of the cluster.

We will use the neighborhood clustering in two different ways:

1. Clustering based on overall population count, venues count, and planning areas type

We will cluster the neighborhood based on population count, venues count, and planning areas type. In terms of population count, a well populated neighborhood may provide significant number of residential customers. Culinary venues for such customers may be catered for family friendly restaurants with lower cost options. On the other hand, just because a neighborhood is not well populated doesn't always mean that they are unviable. Some neighborhood is a financial centre (banking, insurance, etc) which have very few registered domestic residents but very full of office workers. Such neighborhood can have very high count of commercial venues but very low residential population. A culinary entrepreneur needs to consider what kind of venues that cater to this people.

Some other regions are designated into a different type of planning areas type. A natural reserve region tends to have very small population and venues count, but the culinary venues can be high end restaurants since they also cater to wealthy tourist. Expensive and extraordinary menus will be profitable in such location. Some region is reserved for industrial and logistic centre such as petroleum refinery and shipyards. It is important to offer low cost and fast food options in such places. Other regions designated for airports/airbases also need special consideration.

## 2. Clustering based on culinary venues

Apart from the above considerations, we can further clusters the neighborhood also based on the culinary venues that they already have. This way we can offer our target audience, the culinary entrepreneurs, with data that can help them to check their competitors and their potential customers.

By having two kinds of clustering, we will help our target audience to compare neighborhood in various ways. For example, let say we identify that ramen restaurants is popular for some residential neighborhoods. However, we identify that there are other residential neighborhoods that does not have any ramen restaurant. We can identify this fact to culinary entrepreneurs to consider opening ramen shop in that location.

Results for neighborhood clustering is shown in detail in section 4.2.

## 4. Results

### 4.1 Results of Exploratory Data Analysis

Figure 7 shows the statistic of population count for all neighborhood in Singapore. In average, there are 72624 person for each neighborhood. The most populous neighborhood, Bedok, has 281300 domestic residents in this zone. The third quartile is in 130650 which is around the population of Toa Payoh and Bukit Panjang. The median population is in 20030 which is in Outram. The first quartile is in 180 persons which is around the population of Lim Chu Kang and Seletar. There are some zones that has zero person since they are in reserved regions. Some of those zones are reserved for shipping industry (Marina South, Marina East, Straits View), airport and naval base (Changi Bay), and natural reserves (Simpang, Central Water Catchment). The histogram in Figure 8 shows that in general, the population count varies greatly across the various neighborhoods.

```
In [118]: df_final['population'].describe()

Out[118]: count      55.000000

          Name: population, dtype: float64
```

Figure 7. Statistic of population count for all neighborhoods in Singapore.

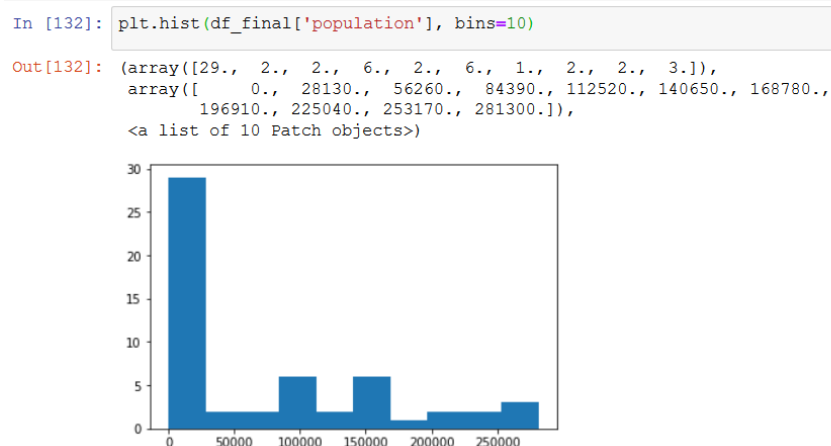

Figure 8. Histogram of population count for all neighborhoods in Singapore.

Figure 9 shows the statistic of venues count for all of the neighborhood. In general, it can be seen that across the 55 neighborhoods, the number of venues in average is 29.7 venues for each neighborhood. The median count of venues is 19, which indicate that the distribution is dominated by some neighborhood that has significantly higher counts of venues than the other. There is at least one venues for each neighborhood. The first and third quartiles of venues count is in 7 and 46 respectively. Histogram in Figure 10 shows the distribution of venues count across the entire neighborhood.

Figure 10. Histogram of venues count for all neighborhoods in Singapore.

Table 1 shows the classification of culinary venues in Singapore neighborhoods. The category information is collected from Foursquare API. Since, there are so many categories, this will not be useful for general understanding of the culinary map in Singapore. We further classify this category into major category which will further help us to recommends potential venues for various culinary business in Singapore.

Table 1. Culinary Venues in Singapore Neighborhoods

Major Category	Category (some category may belong to more than one major category)	Explanation
Food Court and Cafeteria	'Food Court', 'Breakfast Spot', 'Bistro', 'Deli / Bodega', 'Food Stand', 'Bed & Breakfast', 'Cafeteria', 'Food & Drink Shop', 'Street Food Gathering', 'Comfort Food Restaurant'	General food court and cafeteria, not food or culinary culture specific.
Fastfood	'Burger Joint', 'Sandwich Place', 'Fast Food Restaurant', 'Fried Chicken Joint', 'Steakhouse', 'Burrito Place', 'Wings Joint', 'BBQ Joint', 'Fish & Chips Shop', 'Diner', 'Buffet', 'Pizza Place'	Fastfood (burger, sandwich, fried chicken etc)
Dessert, Beverages, and Cafe	'Dessert Shop', 'Snack Place', 'Coffee Shop', 'Bubble Tea Shop', 'Frozen Yogurt Shop', 'Café', 'Ice Cream Shop', 'Cha Chaan Teng', 'Juice Bar', 'Tea Room', 'Chocolate Shop'	Places that provide dessert without heavy meal, dessert and beverages focused
Pub, Bar, Alcoholic Beverages	'Gastropub', 'Beer Garden', 'Beer Bar', 'Bar', 'Cocktail Bar', 'Club House', 'Nightclub', 'Hotel Bar', 'Whisky Bar', 'Pub', 'Wine Bar', 'Brewery', 'Wine Shop', 'Sake Bar', 'Sports Bar', 'Rock Club'	Focused on alcoholic beverages
Bakery, Doughnut and Bagel	'Bakery', 'Bagel Shop', 'Donut Shop', 'Pastry Shop', 'Creperie', 'Cupcake Shop'	Bakery and similar establishments
East Asian Restaurant	'Asian Restaurant', 'Chinese Restaurant', 'Japanese Restaurant', 'Hong Kong Restaurant', 'Shaanxi Restaurant', 'Cantonese Restaurant', 'Chinese Breakfast Place', 'Korean Restaurant', 'Japanese Curry Restaurant', 'Taiwanese Restaurant', 'Hainan Restaurant', 'Dongbei Restaurant', 'Szechuan Restaurant', 'Peking Duck Restaurant', 'Seafood Restaurant', 'Sushi Restaurant', 'Hotpot Restaurant', 'Noodle House', 'Ramen'	Chinese, Japanese, Korean, and other East Asian Restaurant

	Restaurant', 'Udon Restaurant', 'Dumpling Restaurant', 'Dim Sum Restaurant'	
South East Asian Restaurant	'Thai Restaurant', 'Malay Restaurant', 'Indonesian Restaurant', 'Filipino Restaurant', 'Vietnamese Restaurant', 'Halal Restaurant'	South East Asian Restaurant
Indian and Middle Eastern Restaurant	'Indian Restaurant', 'Middle Eastern Restaurant', 'Kebab Restaurant', 'North Indian Restaurant', 'South Indian Restaurant', 'Halal Restaurant', 'Vegetarian / Vegan Restaurant'	Indian and Middle Eastern Restaurant
Western Restaurant	'Modern European Restaurant', 'American Restaurant', 'French Restaurant', 'Italian Restaurant', 'Mexican Restaurant', 'Spanish Restaurant', 'German Restaurant', 'Mediterranean Restaurant', 'Greek Restaurant', 'English Restaurant', 'Cuban Restaurant', 'New American Restaurant', 'Southern / Soul Food Restaurant', 'Australian Restaurant'	Western (Europe, American, and Australian) Restaurant
Seafood and Sushi	'Seafood Restaurant', 'Sushi Restaurant', 'Hotpot Restaurant'	May overlap with Japanese and Chinese restaurant.
Udon, Noodle, Ramen	'Noodle House', 'Ramen Restaurant', 'Udon Restaurant'	Noodle like cuisine. Most East Asian and South East Asian Restaurant may provide this kind of food as well.
Dumpling and Dimsum	'Dumpling Restaurant', 'Dim Sum Restaurant'	May overlap with Chinese Restaurant.
Health, Vegetarian, Salad	'Health Food Store', 'Salad Place', 'Soup Place', 'Vegetarian / Vegan Restaurant',	Vegetable and health focused food.

Apart from the culinary venues, we also collect and classify various venues in Singapore neighborhoods as shown in Table 2. This will help our target audience to understand better the surrounding environment in which they will setup their business. Using information about other venues, we can help them to identify and pair their offering to the particular business scene. For example, business offering healthy food may provide better values around sports and medical centre. On the other hand, quick and convenient food may be useful around office and industrial regions.

Table 2. Non-Culinary Venues in Singapore Neighborhoods

Major Category	Category	Explanation
Shopping	'Supermarket', 'Shopping Mall', 'Electronics Store', 'Convenience Store', 'Department Store', 'Clothing Store', 'Bookstore', 'Plaza', 'Cosmetics Shop', 'Kids Store', 'Grocery Store', 'Video Store', 'Sporting Goods Shop', 'Men's Store', 'Smoke Shop', 'Shoe Store', 'Pet Store', 'Kitchen Supply Store', 'Other Repair Shop', 'Mobile Phone Shop', 'Optical Shop', 'Miscellaneous Shop', 'Jewelry Store', 'Stationery Store', 'Paper / Office Supplies Store', 'Flea Market', 'Gift Shop', 'Bike Rental / Bike Share', 'Fruit & Vegetable Store', 'Flower Shop', 'Auto Garage', 'Bike Shop', 'Shopping Plaza', 'Market', 'Print Shop', 'Night Market', 'Furniture / Home Store', 'Shop & Service', 'Video Game Store'	Shopping places
Finance	'Bank', 'Business Service'	Finance Centres
Entertainment	'Multiplex', 'Karaoke Bar', 'Movie Theater', 'Theater', 'Concert Hall', 'General Entertainment', 'Music Venue', 'Theme Park Ride / Attraction', 'Indie Theater', 'Arts & Entertainment', 'Museum', 'Art Gallery', 'Recreation Center', 'Casino', 'Arcade'	Entertainment Places
Park, Garden, Waterbody, Outdoor	'Trail', 'Garden', 'Garden Center', 'Dog Run', 'Skate Park', 'Park', 'Waterfront', 'Outdoor Sculpture', 'Bridge', 'Bay', 'Sculpture Garden', 'Canal', 'Scenic Lookout', 'Playground', 'Other Great Outdoors', 'Harbor / Marina', 'Beach', 'Pier', 'Cruise', 'River', 'Lighthouse'	Park, Garden, Waterbody, Outdoor Locations
Transport	'Bus Station', 'Train Station', 'Bus Line', 'Light Rail Station', 'Tunnel', 'Platform', 'Airport Service', 'Airport', 'Boat or Ferry', 'Bus Stop', 'Airport Terminal', 'Metro Station'	Transport Hub
Sports and Health	'Gym', 'Gym / Fitness Center', 'Pool Hall', 'Pharmacy', 'Pool', 'Soccer Stadium', 'Martial Arts Dojo', 'Basketball Court', 'Gym Pool', 'Golf Course', 'Medical Center', 'Doctor's Office', 'Golf Driving Range', 'Stadium', 'Field', 'Soccer Field', 'Racetrack'	Sports and Health Places
Beauty Care	'Salon / Barbershop', 'Spa', 'Massage Studio', 'Yoga Studio', 'Dance Studio', 'Boutique'	Beauty Care Places
Hotel and Inn	'Hotel', 'Motel', 'Hostel', 'Rest Area'	Hotel and Inn Places

Education	'General College & University', 'Student Center', 'Speakeasy', 'High School'	Education Places
Other	'Hobby Shop', 'Gaming Cafe', 'Performing Arts Venue', 'History Museum', , 'Arts & Crafts Store', , 'Monument / Landmark', 'Lounge', 'Event Space', 'Office', 'Government Building', 'Housing Development', 'Post Office', 'Farm'	Other

## 4.2 Results of Machine Learning for Neighborhood Clustering

### a. Neighborhood Clustering

We classify various neighborhood to 7 different clusters in term of the general neighborhood situations using machine learning. For each neighborhood, we consider population count, venues count, and whether they are industrial region, natural reserve, or airport. For the industrial region, natural reserve or airport they are indicated using one hot encoding. For the population and venues count, they are normalized using scikit-learn min max scaler module.

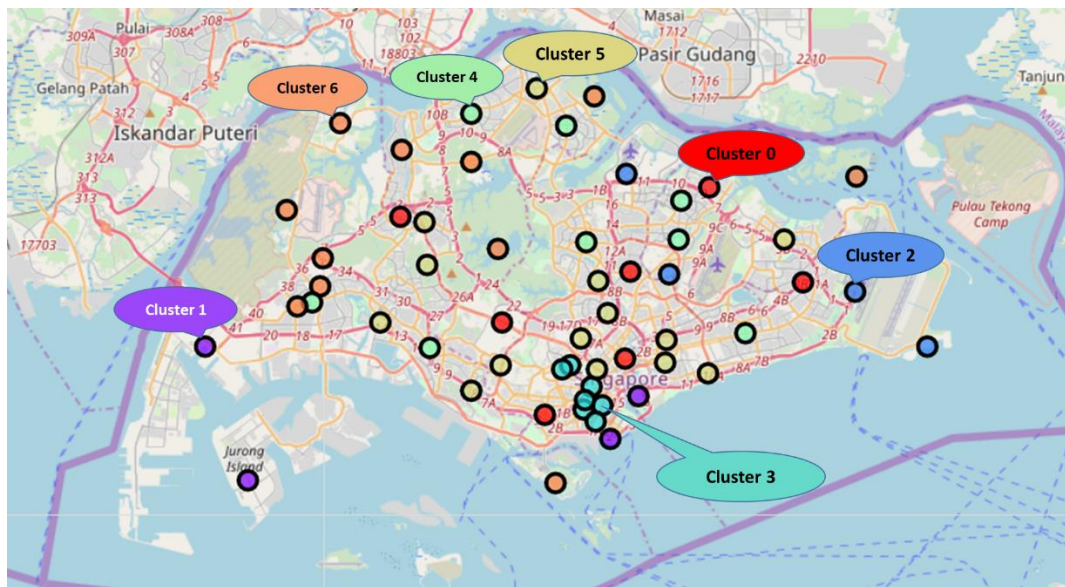

Figure 11. General clustering of Singapore Neighborhood.

Subsequently, we put the normalized dataframe into scikit-learn KMeans clustering algorithm. Based on that, we get 7 different clusters with various characteristics. We plot those clusters using Folium map as shown in Figure 11.

We tabulate the general classification in the Table 3 as shown below.

Cluster	Population Count /neighborhood	Venues Count/ neighborhood	Neighborhoods and General Description
Cluster 0	77280 - 257110	4 to 12	Bukit Merah, Bukit Timah, Choa Chu Kang, Kallang, Punggol, Serangoon, Tampines (heavily populated residential area with few venues)
Cluster 1	0 - 70	1 to 13	Marina East, Marina South, Tuas, Western Islands (industrial area)
Cluster 2	0 - 2080	6 to 20	Changi, Changi Bay, Paya Lebar, Seletar (airport, airbase area)
Cluster 3	0 - 20030	61 to 100	Downtown Core, Museum, Newton, Outram, Singapore River, Straits View, Orchard (financial area)
Cluster 4	93000 - 281300	32 to 63	Ang Mo Kio, Bedok, Clementi, Hougang, Jurong West, Sengkang, Woodlands, Yishun (heavily populated residential area with lots of venues)

## 5. Discussion

Since, there are so many possibilities for culinary category in Singapore, we decide to showcase three kinds example for case studies.

Case studies:

1. Opening Healthy Food Near Health and Sport Centre
2. Opening Ramen Noodles Shop in Populated Residential Areas
3. Opening Bubble Tea Stall at Outdoor Parks and Beaches

### Case Study 1: Opening Healthy Food Venues Near Health and Sport Centres

We want to study whether we can find location of health and sport centre that require healthy food options. This will be useful for culinary entrepreneur who have plans on this specific category.

As shown in Table 10, there are many places that have more health foods option available than health centres available. However, there are also places in which they has fewer health foods option than health centres available. This kind of places may possess high potential for healthy food business. Details for individual venues are shown in Table 11.

Table 10. Statistic of Health Foods Venues Count and Health Centres Count.

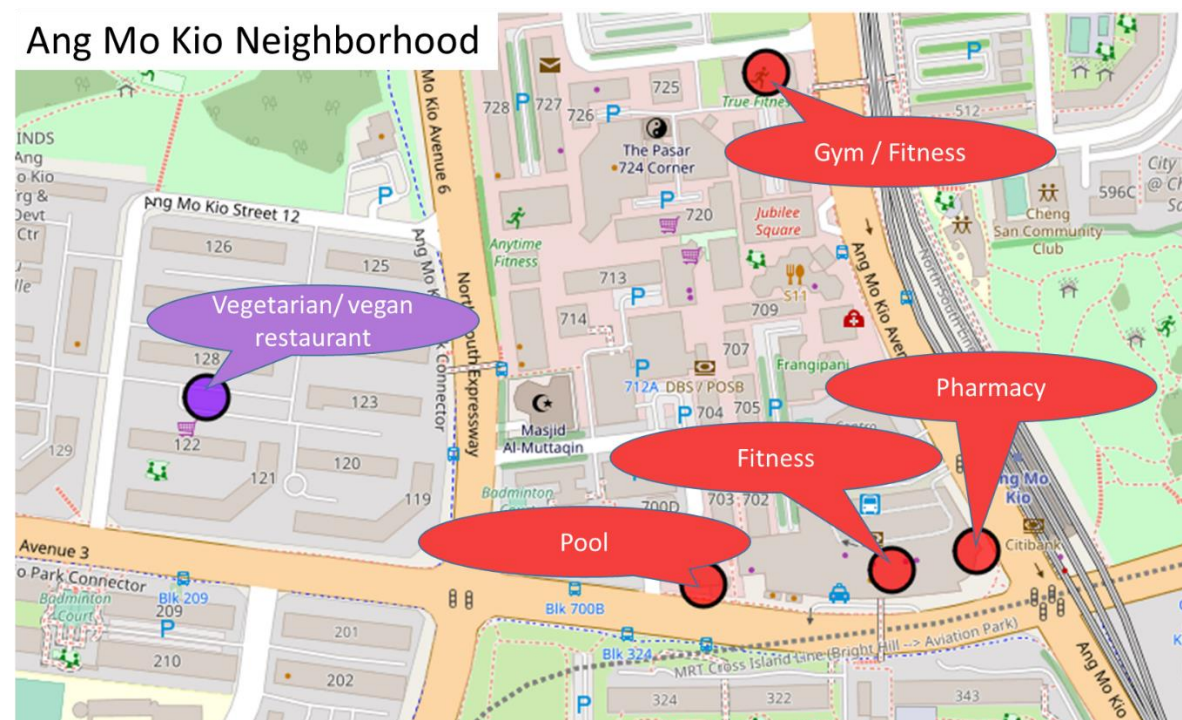

Figure 13. Map of Health Foods and Health Centres in Ang Mo Kio Neighborhood

## Example of Neighborhood: Bishan

Table 14 shows that health centres are available in Bishan neighborhood. There are sports hall, football stadium, swimming complex and gym. However, there is not healthy food options at all around this neighborhood as shown in Figure 14. It means that there is some niche in this specific culinary option that can leveraged by entrepreneurs.

Table 14. Health Foods and Health Centres in Bishan

### Check for Bishan

```
df_case1_c = singapore_venues_case1[singapore_venues_case1['Neighborhood'] == 'Bishan']
df_case1_c = df_case1_c[(df_case1_c['health_foods'] == 1) | (df_case1_c['health_centres'] == 1)]
df_case1_c
```

	Neighborhood	Neighborhood Latitude	Neighborhood Longitude	Venue	Venue Latitude	Venue Longitude	Venue Category	health_foods	health_centres

Figure 14. Map of Health Foods and Health Centres in Bishan Neighborhood

## Case Study 2: Opening Ramen Noodles Shop in Populated Residential Areas

Table 15 shows the number of noodles based shops (Noodle, Ramen, Udon) in Singapore Neighborhood. Most neighborhood have at least one noodles based shop but may have up to 5 of them. If someone want to open a new family friendly ramen shop in residential areas, the best bet is to find a Neighborhood with the most population while have the fewer number of noodle venues. The last columns of the Table 15 shows the number of population / noodle\_venues in each neighborhood. Top three neighborhood to open such venues are in Jurong West, Bedok, and Geylang since they have the fewer amount of noodle venues per given population. The most competitive neighborhood will be Straits View (financial centre region), Paya Lebar, Museum, and Orchard.

Table 15. Noodles Based Shop in Singapore Neighborhood

```
df_case2['noodle_cluster'] = df_case2['population/noodle_venues'].apply(population_per_noodle_venues_encoder)
df_case2 = df_case2.sort_values('population/noodle_venues', ascending=False)
df_case2
```

	Neighborhood	noodle_foods	population	longitude	latitude	population/noodle_venues	noodle_cluster
5	Jurong West	1	266720	103.704444	1.339722	266720.000000	0
1	Bedok	2	281300	103.927339	1.323600	140650.000000	0
4	Geylang	1	111610	103.886944	1.320556	111610.000000	0
17	Yishun	2	214940	103.835364	1.430367	107470.000000	0

16	Toa Payoh	2	120480	103.856328	1.334303	60240.000000	1
0	Ang Mo Kio	3	165710	103.845619	1.370167	55236.666667	1
12	Queenstown	2	97870	103.786128	1.294167	48935.000000	2
6	Marine Parade	1	47250	103.907778	1.303056	47250.000000	2
3	Clementi	2	93000	103.764939	1.316181	46500.000000	2
8	Novena	2	48950	103.842431	1.320858	24475.000000	2
10	Outram	3	20030	103.843889	1.284889	6676.666667	3
13	River Valley	4	9930	103.886149	1.308398	2482.500000	3
14	Singapore River	5	2980	103.845154	1.289178	596.000000	4
9	Orchard	2	990	103.832876	1.305272	495.000000	4
7	Museum	1	420	103.848500	1.296611	420.000000	4
11	Paya Lebar	2	40	103.887821	1.353899	20.000000	4
15	Straits View	2	0	103.850553	1.278552	0.000000	4

Figure 15 shows the Singapore neighborhood classified in terms of population count / noodle venues count. Cluster 4 indicate population/noodle venues count less than 1000. Cluster 3 indicate population/noodle venues count between 1000 and 10000 persons. Cluster 2 indicate population/noodle venues count between 10000 and 50000. Similarly, Cluster 1 indicate population/noodle venues count between 100000 and 300000. Ultimately, for neighborhoods with population/noodle venues count that exceed 300000 can be classified as Cluster 0.

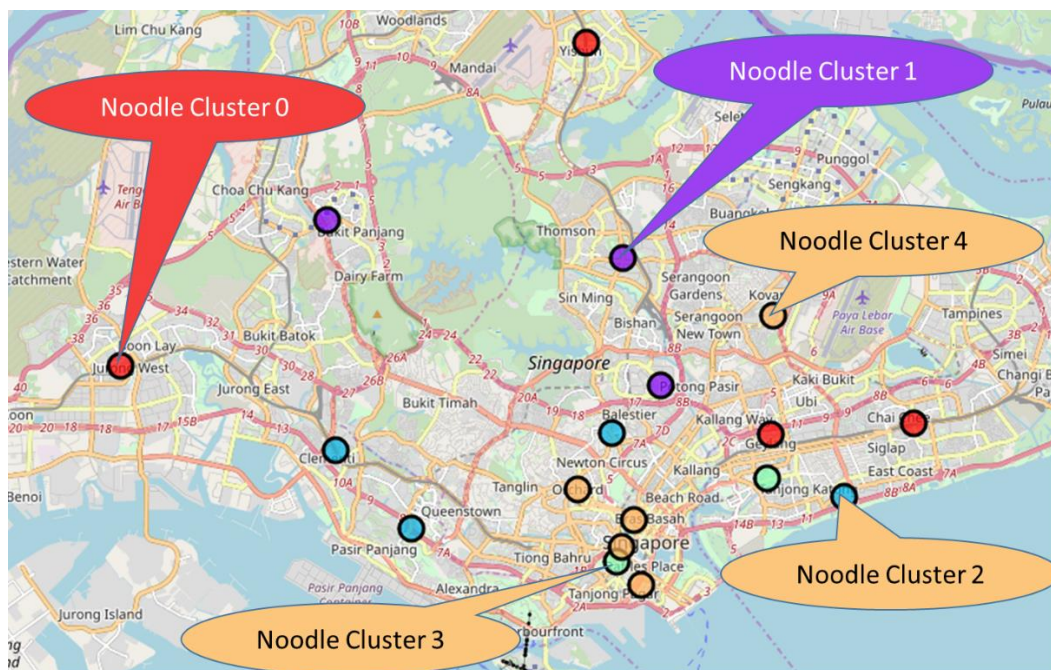

Figure 15. Map of Noodle Based Restaurants and Population Centre in Singapore

### Case Study 3: Opening Bubble Tea Stall at Outdoor Parks and Beaches

Table 16 shows the number of refreshments stalls in Singapore Neighborhood. Most neighborhood have at least one refreshment stalls but may have up to 11 of them. If we want to open a refreshment stall, for example selling bubble tea, it may be a good idea to sell them at outdoor parks and beaches. In the hot and humid tropical island climate of Singapore, in such places, sweet and cold beverages may sell very well. So we also locate the number of outdoor parks and beaches venues at each neighborhood. Some neighborhood has a lots of outdoor venues such as Marina South with very few refreshment stalls. Other neighborhood like Downtown Core also has a lots of outdoor venues but they also have significant numbers of refreshment stalls. It is important to pinpoint locations and exact categories of such stalls to see whether it is still possible to compete with other refreshment stalls.

Table 16. Refreshment Stalls at Outdoor Parks and Beaches Venues

```
In [370]: df_case3['population'] = df_case3['Neighborhood'].apply(neighborhood_population_dictionary_function)
df_case3a = df_case3.sort_values('refreshment per venues')[['Neighborhood', 'refreshing_desserts_beverages_venues', 'outdoor_p
df_case3a.head(20)
```

Out[370]:

	Neighborhood	refreshing_desserts_beverages_venues	outdoor_park_venues	refreshment per venues	population
16	Mandai	0	2	0.000000	2090
18	Marina South	0	9	0.000000	0
17	Marina East	0	1	0.000000	0
22	North-Eastern Islands	0	1	0.000000	50
11	Downtown Core	7	9	0.777778	2510
41	Tuas	1	1	1.000000	70
37	Southern Islands	1	1	1.000000	1800
32	Seletar	1	1	1.000000	250
36	Singapore River	5	4	1.250000	2980
40	Toa Payoh	2	1	2.000000	120480
35	Serangoon	2	1	2.000000	117310
31	Rochor	3	1	3.000000	13450
34	Sengkang	3	1	3.000000	240640
43	Yishun	7	2	3.500000	214940
19	Marine Parade	4	1	4.000000	47250
14	Jurong West	11	2	5.500000	266720
6	Bukit Panjang	6	1	6.000000	140820
20	Museum	9	1	9.000000	420
25	Outram	9	1	9.000000	20030
1	Bedok	10	1	10.000000	281300

## Example of Neighborhood: Marina East

Table 17 shows the outdoor venues available in Marina South. Mostly, the place is for cruise or beach viewing. No venues registered for refreshment and beverages stalls in this location as shown in Figure 16. So this may be a potential location to open bubble ice tea stalls for tourist refreshments.

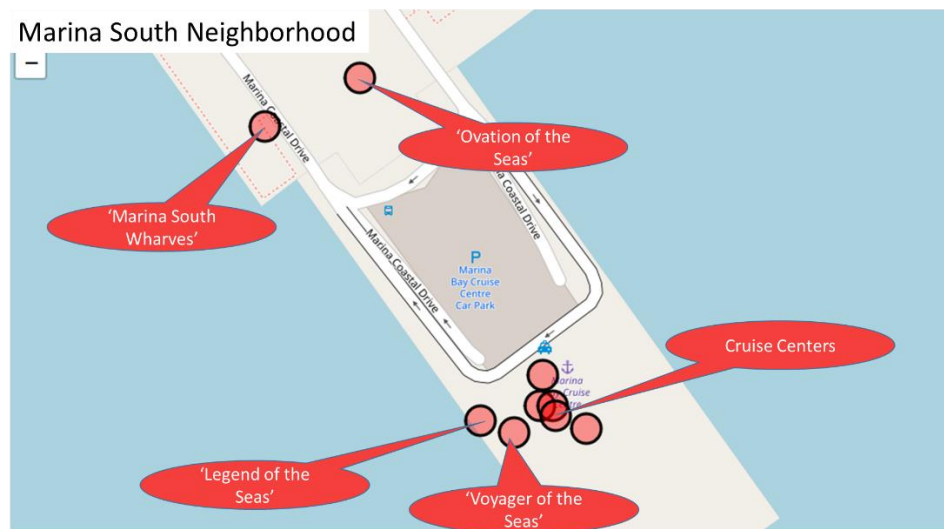

Table 17. Marina South Neighborhood Outdoor Venues

### Check for Marina South Neighborhood

```
df_case3_a = singapore_venues_case3[singapore_venues_case1['Neighborhood'] == 'Marina South']
df_case3_a = df_case3_a[(df_case3_a['refreshing_desserts_beverages_venues']>0) | (df_case3_a['outdoor_park_venues']>0)]
df_case3_a

## Example Neighborhood: Downtown Core

Table 18 shows the outdoor venues available in Downtown Core Neighborhood. Mostly, the place is for recreation and entertainment. Most refreshment shops or stalls here are café, although some also sell ice cream and snacks. Figure 17 shows that although there are many venues, none of them sell bubble ice tea beverages. So this may be a potential location to open bubble ice tea stalls for tourist refreshments.

## 6. Conclusion

In this report, I studied the clustering of Singapore's neighborhoods based on their population and venues count. Using Foursquare API, I collected detailed information about local venues to study culinary and non-culinary venues on each particular neighborhood. Subsequently, I used this information to study locations for new culinary venues that can serve the particular locale needs and requirements. These model can be useful to help culinary entrepreneurs to decide locations that offer numerous customers and with fewer number of competitors.
